

understanding AI agents

what they are, what they are made of, and how to build one.

The future of work

humans decide what & why. agents execute how.

HUMANS

strategy

creativity · judgment

TOGETHER

planning

break goals into tasks

AGENTS

execution

research · content · code · ops

the job becomes directing the work — not doing all of it.

From manual tools to agent teams

BEFORE

people manually operate every tool.

NOW

people use AI tools — but context stays scattered.

AFTER

context layer — structured docs · learns from use · A2A

agents use the tools while reusable company context builds.

Today, Building application with AI Agents

Everyone, Building application **with AI Agents**

Tomorrow ,Building application **for AI Agents**

shifting from human UX/UI to agent-first

Era of agentic software

what is an AI agent?

What is an AI agent?

answers questions

agent

does work, more autonomous

What is an agent made of?

01

LLM

the brain

02

harness

the operating
system

03

tools

the hands

04

context

what it knows now

05

memory

what it remembers

intelligence is not enough — the system around the model makes it useful.

The LLM — the brain

the reasoning engine.

Five ways to build AI agents

01 Claude / ChatGPT cowork

simple AI workflows

02 AI automation platforms

advanced AI workflows

03 Agent builders

no-code agents

04 Open-source agent platforms

OpenClaw · Hermes

05 Agentic frameworks

full control, in code

Claude / ChatGPT cwork

simple AI workflows, straight from the chat you already use.

CAN'T DO

- ✗ self-improvement
- ✗ build a context layer
- ✗ multi-model
- ✗ overcome errors
- ✗ deep tool integration

AI automation platforms

advanced AI workflows, wired between your tools.

vs.

CAN'T DO

- ✗ self-improvement
- ✗ overcome errors
- ✗ build a context layer

Agent builders

visual, no-code platforms for creating agents with prompts, workflows, tools, and integrations — no engineering required.

Relevance AI

AGENTIX

BEST FOR

beginners

business users

rapid prototypes

simple agent workflows

✗ Has restriction layer

Open-source agent platforms

OpenClaw PERSONAL AGENT

a customizable personal agent that works with communication channels, files, tools, and scheduled tasks.

- personal assistants
- self-hosted, messaging-based agents
- custom skills and integrations

Hermes Agent PERSISTENT AGENT

focused on memory, skills, tool usage, and long-running tasks — with subagents and support for multiple AI models.

- agents that improve with repeated use
- persistent memory, browser and web tools
- advanced experimentation

Agent frameworks

developer frameworks in code, with full control over how the agent thinks and acts — for custom AI products, complex workflows, and production systems.

reasoning

how the agent thinks

tool usage

what it can act on

memory

what it retains

planning

how it sequences work

human approvals

where people step in

multi-agent

how agents collaborate
