

PLAYBOOK-IQ

FOOTBALL BY THE BOOK

Elite football science and computer vision — for every academy, every player, every football game. No matter the level.

playbookiq.ai

01. The Problem

- **Subjective "Gut-Feeling" Coaching & Rigid Metrics:** Translating development goals into performance metrics is a fractured process driven by intuition. Existing tools are rigid, "one-size-fits-all" products—global giants lack the agility to sit with clubs and continuously co-develop custom solutions that adapt to a team's unique football DNA.
- **Left Behind in the Data Revolution:** While 75% of elite Tier-1 clubs leverage advanced data, 90% of mid-market academies are completely priced out. Building an in-house data lab costs upwards of \$300k/year, leaving this massive segment entirely underserved.
- **Unproven Player Valuation:** Because academies operate against a strict biological clock and cannot mathematically prove a young talent's progression and future ROI to buyers, they consistently lose out on massive transfer fees and lucrative sponsorships.

02.The Solution

Fractional Sports Science Labs

Playbook-IQ acts as an automated, managed gateway that delivers elite-level, lab-backed football metrics to mid-market academies at a fraction of the cost using just the broadcasting footages.

Philosophy-to-Metric Engine

We turn subjective coaching into rigorous science by translating a club's unique tactical goals into automated, custom KPIs. We run a continuous co-development cycle directly with teams to build proprietary metrics tailored to their specific football philosophy.

The Verified Asset Ledger

We eliminate speculative scouting. By generating unbiased, continuous mathematical proof of a player's progression, we provide academies with a definitive data ledger to maximize transfer valuations.

3.The Product

Tactical Video Mapping: Coaches upload raw match footage. The platform automatically tracks player positioning and synchronizes it with tactical match phases (Build-up, Transition, and Finishing).

Elite Built-In Metrics: Instant, out-of-the-box access to advanced mathematical metrics that outperform standard market platforms—including xT (Expected Threat), Pass Networks, and PR (Pressure Resistance) to measure performance under stress.

3. The Product

KEMO

AI Sports Analyst

The bridge between data and the pitch. An integrated AI conversational assistant that interprets complex data graphs and delivers instant, natural-language tactical summaries in Arabic and English.

4. Market size

TAM (Total Addressable Market)

**54.3 BILLION
SAR**

**global sports analytics
market by 2030, with the
highest growth segments
heavily favoring AI-driven
solutions and video
analytics.**

4. Market size

SAM (Serviceable Available Market)

**84 BILLION
SAR**

overall value for the Saudi sports sector by 2030. Driven by Saudi Vision 2030 and massive institutional investments (like PIF's SURJ), regional clubs and academies are mandated to privatize and digitize their operational infrastructure.

4. Market size

SOM (Serviceable Obtainable Market)

**60 MILLION
SAR**

Immediate addressable revenue, targeting the roughly 600 private elite academies and newly privatized mid-market football clubs in the region at an average contract value of 100,000 SAR/year.

5. Business model

- **Premium B2B SaaS (Recurring Base):** Clubs pay a tiered annual software subscription for access to the core platform, tactical visualization dashboards, and the Kemo AI engine.
- **Custom Metric Library (High-Margin Upsell):** Ambitious academies pay an additional premium fee to request custom, localized KPIs tailored to their specific coaching philosophy. These built metrics become exclusive to their dashboard.
- **The Margin Advantage (The Value Loop):** We act as the exclusive gateway. We orchestrate cost-efficient rates with global academic sports labs and package their scientific output into high-margin, sticky enterprise software.

The Beachhead (Direct to Academies)

Phase 1

Target private elite academies and newly privatized lower-tier clubs in the GCC, offering them a zero-hardware, zero-infrastructure onboarding process.

The "Trojan Horse" Transfer Loop

Phase 2

When an academy sells a player to a Tier-1 Pro Club, they hand over the Playbook-IQ data ledger as proof of value. The buying club is forced to interact with our platform to validate the metrics, driving zero-CAC enterprise adoption.

Strategic Federation Alignment

Phase 3

Position Playbook-IQ as the official digital standard for regional football federations mandating digital transformation under Vision 2030 guidelines.

7. Competitors

The Global Giants (Hudl, Stats Perform)

Dominant but built strictly for Western Tier-1 enterprise budgets. They require in-house data science teams to interpret data and completely lack regional benchmarks or Arabic-native AI layers.

PLAYBOOK-IQ

The Wearable Providers (Catapult, GPS vests)

Focus entirely on physical workload and biometric stress (sprints, heart rate), failing to capture the tactical and decision-making intelligence of the squad.

We sit alone in the quadrant of High Tactical Intelligence + Low Infrastructure Requirement. We deliver elite-tier metrics (xT, PR) automated by an Arabic-native AI companion, removing the need for an expensive data department.

8. The Team

Muwafag Hussain

Founder & Lead Architect

- **Engineering background:**
Bachelor's in Surveying Engineering "GIS".
- **Sports knowledge:**
Football performance analyst.
Football tactical analysis diploma,
Barça Innovation Hub.
- **Domain knowledge:**
Vast sports and data experience, +5 years
business experience, +25 certificates,
Arabic, English, & Spanish speaker.

9. The Ask

1. **Access to a Computer Vision Lab:** While our current MVP achieves impressive metrics, the video-capture pipeline still necessitates significant manual intervention. To fully automate our tactical video mapping and scale effectively, we require strategic access to or partnership with an advanced Computer Vision Lab.
2. **Regulatory Support:** We need the incubator's official mentorship and backing to navigate regional sports and tech compliance frameworks smoothly, enabling us to secure our official commercial operating process.
3. **Access to Strategic Networks:** We are looking to leverage the incubator's ecosystem network to establish a connection with the Ministry of Sport. Additionally, we need to facilitate direct introductions for pilot programs with regional private academies, local football federations, and initiatives related to Vision 2030 in sports.

THANK YOU
