Sprints

Planning & Executing Your MVP

A founder's weekly operating rhythm — not an engineering ritual.

Walid Elaghil

Lead Product Strategist, Salla · Founder, StartHack Framework · Weekend Vibe Builder

What we're covering

1

Why “sprint” needs a founder rewrite

Keep the discipline. Drop the ceremony.

3

Your Sprint Canvas

You will write one live, not just watch one.

5

Sprinting with AI

What genuinely changed — and what did not.

2

The loop: Plan → Build → Reflect

Three moves. Every seven days.

4

The plan ritual

Where sprints are actually won or lost.

6

Precautions

Top mistakes to avoid

45 minutes together, then 15 for your questions.

👋 I lived the two worlds...

GROWTH MANAGER

Helped them acquire more than 32 schools in 2 months

PM

Built the product and helped getting them to PMF

VENTURE BUILDER

Helped build 7 startups from the ground up

PM

joined at ~32 people, left it past 900 and a \$4B valuation

PRODUCT INSTRUCTOR

Deep practical product masterclasses

HEAD OF PROD

zBuilt 3 squads, product strategy and took it to \$60M GMV in two years

PM > Lead Product Strategist

Built a flagship B2B sales channel, Activation Exp and now leading prod strategy serving 68k merchants with 33.5B SAR GMV

STARTHACK FRAMEWORK

Your Startup Guide From Idea To Product/Market Fit

Last week, in one line.

What did you promise yourself you'd finish last week —
and did you?

Zoom chat · One sentence

TASKS vs. **OUTCOMES**

“Sprint” is borrowed from a world you don’t live in

SCRUM'S SPRINT

Built for a team you do not have

- A dedicated PM sets the backlog
- A separate team of engineers builds it
- A Scrum Master runs the ceremony
- Two-week cycles, daily standups, story points
- Calibrated over years, for 6–10 people

YOUR SPRINT

Every one of those roles is you

- You set the scope
- You — and maybe AI — build it
- You run the ceremony, or skip it and pay later
- One week, no standups, no one to catch your drift
- A team of one, on a deadline nobody gave you

A sprint is not a development ceremony. A weekly promise!

ENGINEERING DEFINITION

A timebox for delivering a planned slice of work.

FOUNDER DEFINITION

A timebox for moving one meaningful business outcome forward.

THE ULTIMATE TEST

At the end of the week, can you point to a customer or business outcome that changed because of the sprint?

THE SPRINT FRAMEWORK

The Sprint Loop

Three step process to ship outcomes! Choose less. Move faster. Learn earlier.

One founder sprint = three moves.

Seven days. Then you do it again.

ZOOM OUT

Your MVP is a sum, not a reveal.

Each block is one promise you actually kept.

ONE SHOT IS A HUGE RISK - *because you'll never know why!*

The AI-era founder sprint, in three beats.

MONDAY

Promise + fill canvas

Define the week's promise. Break it into AI-buildable chunks, each with acceptance criteria you wrote, not AI.

30 min

DAILY

Build → test → iterate

Loops that took days now take hours. Run several passes — do not stop at the first draft that looks good.

FRIDAY

Score + validation check

Promise Kept and Signal Quality. Then the one question: did we validate, or did we just generate?

30 min

Sprint Board

Plan, Buil, Learn

Date

1 SIGNALS

What changed? Customer, product, revenue, market.

2 WEEKLY OUTCOME

By Friday... (one sentence, outcome-focused)

3 PROOF

We will know because... (metric, behaviour, evidence)

4 EXPERIMENT

By (only the work required to get that proof.

6 LEARN

Actual results, we learned that... (real numbers)

6 DECIDE

Therefore, we will... (Keep / change / kill / double down)

Plan outcomes, not tasks.

A task describes activity. A promise describes movement.

TASK LIST

- Talk to 5 users
- Design onboarding
- Build landing page
- Add analytics
- Post on LinkedIn

Busy ≠ progress

WEEKLY PROMISE

“By Friday, we will know whether new founders can activate without a sales call.”

Then choose the minimum work needed to answer that question.

OUTCOME

EVIDENCE

DECISION

Sprint on riskiest assumptions, not features.

“A shipped feature nobody used isn’t a win.
It’s a cost with a demo attached.”

THE SCOREBOARD MOST FOUNDERS USE

“What did we build this week?”

THE SCOREBOARD THAT PREDICTS SURVIVAL

“What did we prove or disprove this week?”

You are wearing two hats. Name them.

DECIDES WHAT AND WHY

PM-you

- Sets this week's scope
- Decides what 'done' has to prove
- Protects the riskiest assumption, not the biggest feature

DECIDES HOW MUCH AND HOW

Builder-you

- Sets realistic capacity for the week
- Sequences the actual work
- Reports shipped reality, not shipped intention

The danger:

in a company the PM checks the builder's estimate and the builder checks the PM's scope. Solo, there is no natural check. Visionary-you overpromises, tired-you quietly cuts corners — and nobody is in the room to catch either one.

Features To User Stories

Turn feature into a clear benefit to design and develop the perfect solution.

As a (target customer)....

		STORIES			INVEST GUIDELINE						
	Pos it or feature No#	When I'm... (doing something - JOB)	I want to... (do something better – enhance JOB)	So that I can... (desired benefit, eliminate pain)	Independent? Estimable?	Negotiable? Small?	Valuable? Testable?				
MUST HAVE					I	N	V	E	S	T	
SHOULD HAVE					I	N	V	E	S	T	
NICE TO HAVE					I	N	V	E	S	T	

Mental Exercise for MVP thinking: “Kill the Sprint”

THE MVP THINKING

“30% of my capacity is gone

Score the promise — not the busyness.

NUMBER ONE

Promise Kept %

Outcomes delivered ÷ outcomes promised.
One honest fraction, not a feeling.

NUMBER TWO

Signal Quality 1–5

Did it move your core metric or resolve your riskiest assumption? Rate it honestly.

VERY IMPORTANT!

Most of you do not need the number. You need the Friday conversation. If scoring becomes the ritual, you have replaced learning with reporting.

PART TWO

Sprinting in the age of AI

Four things genuinely broke. One thing did not move at all.

Capacity used to equal headcount.

THE OLD ASSUMPTION

Capacity = headcount × time

Story points were calibrated to human throughput — how much one engineer reliably ships in a cycle. Predictable, but hard-capped by who is on the team.

THE NEW REALITY

One founder + AI can execute what needed three people

But that output is spiky and feature-dependent, not steady. Some weeks AI gives you three engineers, some weeks it gives you a very confident intern.

The bottleneck moved from production to judgment.

The green block did not move.

AI collapses hours of making into minutes. It cannot collapse the need to choose what is worth making.

The baton pass collapsed.

BEFORE: A RELAY RACE

PM specs it, hands it off, a developer builds it

The baton pass — a ticket, a Slack thread, a wait — took days. Half of sprint planning existed to survive that handoff.

NOW: A SOLO LOOP

The handoff happens inside one head, in minutes

Your spec and your build are very nearly the same motion. The days you used to lose in the gap are simply gone.

So your planning artifact is no longer a ticket you write for someone else.

It is a prompt you are about to execute yourself — which means it has to be more precise, not less.

Story points do not fit any more.

THE OLD UNIT

Story points

Estimated human effort and complexity. Genuinely useful when a human is the one typing every line.

THE NEW UNIT

Iteration passes

How many AI-assisted refinement passes it takes to go from a rough draft to something actually correct.

Speed stopped being the bottleneck.

“AI lets you ship the wrong thing faster than ever. Judgment is the bottleneck now — not output.”

ADD THIS ONE LINE TO EVERY FRIDAY REVIEW

“Did we validate an assumption — or did we just generate output?”

AI builds. You plan and you reflect.

PLAN

YOU OWN THIS

Pick the bet. Name the proof. AI can argue with you — it cannot choose for you.

BUILD

HAND THIS OVER

Prototype, copy, code, analysis. This is where the hours collapse into minutes.

REFLECT

YOU OWN THIS

What was proved? AI can summarise the evidence. It cannot make the call.

You still wear every role. AI just changes how fast you switch.

Think of yourself as a very small company with an AI staff — and a human board of one.

STRATEGIST

Choose the problem

AI: challenge your assumptions

PM

Define the promise

AI: turn intent into a crisp plan

DESIGNER

Shape the experience

AI: explore variants fast

ENGINEER

Build the smallest thing

AI: accelerate implementation

GROWTH

Reach and test demand

AI: generate experiments

CEO

Decide and communicate

AI: synthesize — never own the call

Where the tools actually go.

Pick one per row and stop shopping. The tool is never the reason a sprint worked.

SCOPE You own it	A thinking partner to red-team the bet and stress-test the proof — never to choose it	Claude · ChatGPT
DESIGN AI	A thinking partner to red-team the bet and stress-test the proof — never to choose it	Claude Design · Figma Make · Stitch
BUILD AI-accelerated	The artifact itself: flow, copy, code, analysis. Several passes, not one	Claude Code · Cursor · Lovable · Replit
TEST Humans only	Real users, real behaviour. AI writes the script and cleans the notes — it is not the sample	Calendly · Maze · a plain call
REFLECT You own it	Signals summarised, decision made by you and written down where you will find it	Notion · a doc · anything you reopen

Where founder sprints actually fail.

- | | | |
|---|--------------------------------|---|
| 1 | Everything is urgent | 15 “must-do” items = no priority. |
| 2 | AI theater | AI scope, AI code, AI decide... output without a decision or customer test. |
| 3 | Big-bang MVP | Waiting days/weeks for a polished artifact before reality. |
| 4 | No evidence in the plan | The sprint ends with “we built it.” |
| 5 | No Friday review | Every week becomes disconnected from the last one. |

I WILL LEAVE YOU WITH THIS

Cadence beats intensity.

A rhythm of weekly kept promises compounds into a validated MVP faster than any hero sprint ever will!

Your first Sprint Promise starts next Sunday 😊

THE FOUNDER SPRINT

Plan less.
Learn faster.
Keep your word.

One week. One meaningful promise. One evidence loop. One honest score.

The goal is not to finish the week with more tasks done. It is to finish with more truth, more movement, and a sharper next bet.

QUESTIONS

Slido is open — and I stay on after the session for anyone who wants to go through their canvas.
